Shop by category; Registration; Login; View Basket; eSHOP; EXHIBITIONS; PUBLISHERS Aging-associated cardiovascular changes and their ... Aging represents a convergence of declining cardioprotective systems and increasing disease processes that is fertile ground for the development of heart failure. With 50% of all heart failure diagnoses and 90% of all

heart failure deaths occurring in the segment of the population over age 70, heart failure is largely a disease of the elderly. This review discusses the microscopic and macroscopic changes in cardiovascular structure, function, protective systems, and disease associated with [How the Heart Grows Old - AgingCare.com](#)

To begin, we must remember that the heart is a muscle, and like all muscles, undergoes change with age. Not all changes in the older heart are certain, but certain changes are inevitable, even in the absence of disease:

Understanding Heart Aging and Reversing Heart Disease

The heart is an amazing muscle that beats around 100,000 times a day. It is essentially a complex pump that is able to adjust blood pressure, flow, and volume in order to provide your body with all the blood it needs.

Aging changes in the heart and blood vessels: MedlinePlus ...

Heart changes cause the ECG of a normal, healthy older person to be slightly different than the ECG of a healthy younger adult. Abnormal rhythms (arrhythmias), such as atrial fibrillation, are more common in older people. They may be caused by heart disease. Normal changes in the heart include deposits of the "aging pigment," lipofuscin. The heart muscle cells degenerate slightly. The valves inside the heart, which control the direction of blood flow, thicken and become stiffer. A heart
