SYNTHESIS The goal of the hardware synthesis work
within these projects has been to contribute design
methodologies and synthesis techniques which address the
design trajectory from real behavior down to the RT-level
structural specifica tion of the system. In order to provide
complete support for this synthesis trajectory, many design
problems must be

[Application Design: Data-driven vs Domain-driven](#)

One of the advantages of data-driven over domain-driven is the ease of use and implementation. Therefore, data-driven is used where it is necessary to apply the domain-driven (and often this happens unconsciously). Problems arise from the fact that the data-driven is hardly compatible with the concepts of object-oriented programming (of course, if you do use OOP). In small applications, these

[Architecting an Application-Driven WAN Edge | Silver Peak](#)

This requires a dynamic software-driven WAN edge architecture that is about routing or steering traffic intelligently based on application-driven policies. It's not about deploying traditional routers that route based on IP subnets. Software-defined WAN (SD-WAN) solutions have emerged to empower geographically distributed enterprises with a new WAN edge architecture that yields **Application-driven Development of Flexible Packet-oriented ...**
