Cortical vs. Subcortical Strokes - School of Medicine
Astereognosia may occur with cortical stroke, which is a loss of ability to recognize objects by touch, despite intact primary sensory sensation. Lesions of the cortex may result in visual disturbances.

Cortical Sensory Examination - meds.queensu.ca
Cortical Sensory Examination If the primary sensory modalities are normal or only mildly affected, you should test cortical sensory modalities. It is in the secondary sensory cortex that information from all primary modalities (in the primary sensory cortex) is analyzed so that you can appreciate multiple modalities of an object (eg texture and temperature of a cup full of coffee).
