Food Chain - Kid's Corner - Sheppard Software

A food chain shows how each living thing gets food, and how nutrients and energy are passed from creature to creature. Food chains begin with plant-life, and end with animal-life. Some animals eat plants, some animals eat other animals.

What is the difference between food chains and food webs?

FOOD WEBS show how plants and animals are connected in many ways to help them all survive. FOOD CHAINS follow just one path of energy as animals find food. Click below to download the PDF of this information.

Food Chains and Food Webs | Examples of Food ... - Science

A food chain is a flow of energy from a green plant (producer) to an animal (consumer) and to another animal (another consumer) and so on. In this lesson we are going to talk all about food chains and food webs in the environment.

Mercury in the food chain - Canada.ca

Bioaccumulation. The most important pathway for mercury bioaccumulation is through the food chain, as illustrated in the figure below. In the water, plants and small organisms like plankton take up mercury through passive surface absorption or through food intake.

Food chain - ScienceDaily

Food chains and food webs and/or food networks describe the feeding relationships between species in a biotic

community. In other words, they show the transfer of material and energy from one

Food chain - Wikipedia

The food chain's length is a continuous variable that provides a measure of the passage of energy and an index of ecological structure that increases in value counting progressively through the linkages in a linear fashion from the lowest to the highest trophic (feeding) levels.
