Global Navigation Satellite Systems (GNSS), such as GPS, have become an efficient, reliable and standard tool for a wide range of applications. However, when processing GNSS data, the stochastic model characterising the precision of observations and the correlations between them is usually

Key words: Stochastic Modelling, GPS, and Network-Based RTK 1. Introduction Carrier phase-based GPS has become an essential technique for a wide range of precise positioning applications, such as kinematic surveying and vehicle navigation and guidance. The relative positioning concept, in which one GPS receiver's position is derived with the aid of observations made at a stationary

GPS stochastic modelling [electronic resource] : signal ...

This work extends the stochastic model using signal-to-noise ratio (SNR) measurements and time series analysis of observation residuals. The proposed SNR-based observation weighting model significantly improves the results of GPS data analysis, while the temporal correlation of GPS observation noise can be efficiently described by means of autoregressive moving average (ARMA) processes

Estimation of the Stochastic Model of GPS Code and Phase ...

The processing of data gathered with a geodetic measurement technique, like GPS surveying, requires the specification of a mathematical model, consisting of a functional model and a stochastic model.

An Empirical Approach for the Estimation of GPS Covariance ...

An Empirical Approach for the Estimation of GPS Covariance Matrix of Observations objective of this work is to analyze GPS data as a stochastic process, it is necessary to modify the original time series of observations to satisfy the assumptions made in stochastic analysis. The main assumption that will be discussed here is the stationarity of the process. It is clear that GPS

GPS SNR Observations - Gauss

The GPS signal is below the noise level when looked at over it's entire bandwidth of several Megahertz. This is why you can't just hook up an oscilloscope to an antenna and see the signals. Talking about 1KHz or 1Hz bandwidths is an engineering abstraction. These formulae are all incredibly approximate. A dB or three of variation is possible, especially at the extremes where things tend to go

Single-frequency positioning approach with GPS : GPS World

GPS has been the number-one positioning tool for a range of applications during the past few decades. The integration of the emerging global navigation satellite systems, such as the Chinese BeiDou Navigation Satellite System (BDS), can give improved precise (millimeter- to centimeter-level) real-time kinematic (RTK) positioning.
