Left-sided heart failure is the most common form of congestive heart failure. The left side of the heart is responsible for pumping blood to the rest of the body. Blood backs up into the lungs as

[Heart failure - Symptoms and causes - Mayo Clinic](#)
Heart failure, sometimes known as congestive heart failure, occurs when your heart muscle doesn't pump blood as well as it should. Certain conditions, such as narrowed arteries in your heart (coronary artery disease) or high blood pressure, gradually leave your heart too weak or stiff to fill and pump efficiently.

[Your Dog Has Congestive Heart Failure Now What? | FitBark](#)

Congestive heart failure is a difficult diagnosis for dogs and their owners. While there is very little you can do to stop congestive heart failure altogether, it is possible to slow the process and make your dog more comfortable so you can enjoy a little more time together.

[Congestive Heart Failure - Rexall.ca](#)

Congestive heart failure (CHF) occurs when the heart isn't able to pump blood normally. As a result, there is not enough blood flow to provide the body's organs with oxygen and nutrients. The term "heart failure" does not mean that the heart stops beating completely, but that the heart is not working as efficiently.

[Heart failure - Wikipedia](#)

Terminology. Heart failure is a pathophysiological state in which cardiac output is insufficient to meet the needs of the body and lungs. The term "congestive heart failure" is often used, as one of the common symptoms is congestion, or build-up of fluid in a person's tissues and veins in the lungs or other parts of the body. Specifically

[Heart failure | Heart and Stroke Foundation](#)

Heart failure (HF) is a condition that develops after the heart becomes damaged or weakened. Heart failure occurs when the pumping action of your heart is not strong enough to move blood around, especially during increased activity or under stress.
