[Molecular evolution - Wikipedia](#)

Molecular evolution is the process of change in the sequence composition of cellular molecules such as DNA, RNA, and proteins across generations. The field of molecular evolution uses principles of evolutionary biology and population genetics to explain patterns in these changes.

**Evolutionary Genetics (Stanford Encyclopedia of Philosophy)**

Evolutionary genetics is the broad field of studies that resulted from the integration of genetics and Darwinian evolution, called the modern synthesis (Huxley 1942), achieved through the theoretical works of R. A. Fisher, S. Wright, and J. B. S. Haldane and the conceptual works and
