[Difference Between Plant and Animal Cell Division ...](#)
Plant cell division is the production of two daughter plant cells from a mother cell. Plant's vegetative cell division occurs by mitosis and gametes are produced by meiosis. During the mitotic division of plant cells, they undergo usual M phase and cytokinesis begins after the late stages of the M phase. The cytokinesis is significantly different in plant cells due to the presence of a cell wall.

CELL DIVISION: Cells of all organisms undergo cell division at one or the other stages of their development. In many unicellular forms, cell division is an important mode of multiplication or calls it as reproduction. But in multicellular organisms, cell division is absolutely required for growth. Reproductive elements like gametes are the other important products of cell division. Types of [Plant Cell - Definition, Parts and Functions | Biology ...](#)
Plant cells have a primary cell wall, which is a flexible layer formed on the outside of a growing plant cell, and a secondary cell wall, a tough, thick layer formed inside the primary plant cell wall when the cell is mature.

Cell division is a process by which the cell duplicates itself either for growth and repair or for reproduction of organism. Chromosome plays an important role during cell division.

[Plant Cell vs Animal Cell - Difference and Comparison | Diffen](#)

A difference between plant cells and animal cells is that most animal cells are round whereas most plant cells are rectangular. Plant cells have a rigid cell wall that surrounds the cell membrane. Animal cells do not have a cell wall. When looking under a microscope, the cell wall is an easy way to distinguish plant cells.

Cell

The cell is the basic unit of life in all organisms. Like humans and animals, plants are also composed of several cells. The plant cell is surrounded by a cell wall and there are different cell organelles which are involved in providing shape to the plant cell and in maintaining proper functioning of a cell.

Plant cell - Wikipedia

Plant cells differentiate from undifferentiated meristematic cells (analogous to the stem cells of animals) to form the major classes of cells and tissues of roots, stems, leaves, flowers, and reproductive structures, each of which may be composed of several cell types.
