[Receptor tyrosine kinase - Wikipedia](#)

Receptor tyrosine kinases (RTKs) are the high-affinity cell surface receptors for many polypeptide growth factors, cytokines, and hormones. Of the 90 unique tyrosine kinase genes identified in the human genome, 58 encode receptor tyrosine kinase proteins. Receptor tyrosine kinases have been shown not only to be key regulators of normal cellular

[Receptor Tyrosine Kinase - an overview | ScienceDirect Topics](#)

Receptor Tyrosine Kinase. The receptor tyrosine kinases (RTKs) are a large superfamily of receptors that function as the receptors for a wide array of growth factors, including epidermal growth factor (EGF), nerve growth factor (NGF), platelet-derived growth factor (PDGF), vascular endothelial growth factor (VEGF), fibroblast growth factor (FGF)

[Receptor tyrosine kinases: mechanisms of activation and ...](#)

Receptor tyrosine kinases (RTKs) are essential components of signal transduction pathways that mediate cell-to-cell communication. These single-pass transmembrane receptors, which bind polypeptide ligands mainly growth factors play key roles in processes such as cellular growth, differentiation, metabolism and motility.

[Tyrosine Kinase | Cell Signaling Technology](#)

Whether functioning as cell surface receptors or as internal effectors of cell signaling, tyrosine kinases control multiple aspects of cell and organism growth, differentiation, and function. Approximately 20 receptor tyrosine kinase (RTK) families and at least 9 distinct groups of nonreceptor tyrosine kinases have been identified in humans. Regardless of localization, all tyrosine kinases

[Receptor tyrosine kinases | definition of Receptor ...](#)

receptor [re-sep-tor] 1, a molecule on the cell surface (cell-surface or membrane receptor) or within a cell, usually in its nucleus (nuclear receptor) that recognizes and binds with specific molecules, producing some effect in the cell; e.g., the cell-surface receptors of immunocompetent cells that recognize antigens, complement components

#### Tropomyosin receptor kinase A - Wikipedia

Tropomyosin receptor kinase A (TrkA), also known as high affinity nerve growth factor receptor, neurotrophic tyrosine kinase receptor type 1, or TRK1-transforming tyrosine kinase protein is a protein that in humans is encoded by the NTRK1 gene.

#### Non-receptor tyrosine kinase - Wikipedia

Non-receptor tyrosine kinases are a subgroup of protein family tyrosine kinases, enzymes that can transfer the phosphate group from ATP to a tyrosine residue of a protein (phosphorylation). These enzymes regulate many cellular functions by switching on or switching off other enzymes in a cell.
