Small-Molecule Microarrays - biointeractive.org  
Small Molecule Microarray Background. Microarray technology was originally developed for putting small spots of DNA onto a glass slide. But the technology is generally applicable to transferring any type of chemical in small quantities to a glass slide. One application of microarray technology is the small molecule microarray, in which

Small molecule - Wikipedia

Small-molecule anti-genomic therapeutics, or SMAT, refers to a biodefense technology that targets DNA signatures found in many biological warfare agents. SMATs are new, broad-spectrum drugs that unify antibacterial, antiviral and anti-malarial activities into a single therapeutic that offers substantial cost benefits and logistic advantages for physicians and the military. **Small Molecule Microarrays for Drug Discovery**  
Small molecule microarrays allow screening of biomolecules such as peptides and carbohydrates. By immobilizing these small molecules on a microarray, interactions can be quickly assessed through a

**Screening of Small Molecule Microarrays for Ligands** ...

In this study, we optimized the key experimental parameters for screening living mammalian cells using known small molecule ligands on the previously developed SMM, which requires simultaneous optimization of ligand presentation, the effect of motion, incubation time, ligand concentration, and the number of pinned cells.

Microarrays | Free Full-Text | Screening of Small Molecule ...

The screening of living cells using high-throughput microarrays is technically challenging. Great care must be taken in the chemical presentation of potential ligands and the number of collisions that cells make with them. To

overcome these issues, we have developed a glass slide-based microarray system to discover small molecule ligands that

#### Screening of Small Molecule Microarrays for Ligands

...

The small molecule microarray (SMM) is one of the most effective profiling solutions through the use of pre-patterned regions of interest (ROI), which provide chemical identity and functionality [7-11]. Although having significant potential, high-throughput SMM screening is currently limited due to the use of non-physiological contexts (e.g.
