[Transcranial magnetic stimulation - Wikipedia](#)

Transcranial magnetic stimulation (TMS), also known as repetitive transcranial magnetic stimulation (rTMS), is a noninvasive form of brain stimulation in which a changing magnetic field is used to cause electric current at a specific area of the brain through electromagnetic induction.

while electroconvulsive therapy (ect) uses an electric current to induce seizures, transcranial magnetic stimulation (tms) creates a magnetic field to induce a much smaller electric current in a speci

[Transcranial magnetic stimulation - Mayo Clinic](#)

Transcranial magnetic stimulation (TMS) is a noninvasive procedure that uses magnetic fields to stimulate nerve cells in the brain to improve symptoms of depression. TMS is typically used when other depression treatments haven't been effective.

[Repetitive Transcranial Magnetic Stimulation \(rTMS\) | CAMH](#)

What is Repetitive Transcranial Magnetic Stimulation (rTMS)? Transcranial Magnetic Stimulation (TMS) involves a series of short magnetic pulses directed to the brain to stimulate nerve cells. The magnetic pulses stimulate area neurons and change the functioning of the brain circuits involved.

[Repetitive Transcranial Magnetic Stimulation - Healthline](#)

Repetitive transcranial magnetic stimulation (rTMS) is a form of brain stimulation therapy used to treat depression and anxiety. It has been in use since 1985. The therapy involves using a magnet.

In transcranial magnetic stimulation (TMS), an electromagnetic coil placed against the scalp creates a magnetic field that stimulates certain areas of the brain. Why it's done Depression is a treatable condition, but for some people, standard treatments aren't effective.

[What is rTMS? | McGill University Health Centre](#)

rTMS is a procedure in which cerebral electrical activity is

influenced by a pulsed magnetic field. The magnetic field is generated by passing brief current pulses through a figure 8 coil. This coil is encased in plastic and is held close to the scalp so that the magnetic field can be focused onto specific areas of the cortex, or surface, of the brain.
