[What is Urinary Diversion? - Urology Care Foundation](#)
Urinary diversion is when the normal structures are bypassed and an opening is made in the urinary system to bring the urine out another way. This might need to be done if your bladder stops working the right way or had to be removed because of cancer or an injury.

[Urinary Diversion | NIDDK](#)

Urinary diversion is a surgical procedure that reroutes the normal flow of urine out of the body when urine flow is blocked. Urine flow may be blocked because of Bladder removal or a malfunctioning bladder may also cause blocked urine flow. When urine cannot flow out of the body, it can accumulate.

[The Different Types of Urinary Diversion | Urology Specialist](#)

[The Different Types of Urinary Diversion](#) There are three different types of urinary diversion, the ileal conduit urinary diversion, the orthotopic continent urinary diversion and the neobladder to urethra diversion. Let's take a look at all three. A urinary diversion is required when the bladder can no longer function normally as a reservoir for storing urine. It is a surgical procedure that [Urinary diversion - Canadian Cancer Society](#)
A urinary diversion is surgery to make a new pouch (reservoir) to collect urine and a new path for urine to leave the body. Normally, urine is produced by the kidneys and flows to the bladder through 2 long tubes called ureters. From the bladder, urine passes out through the urethra.

[Urinary reconstruction, diversion | Cleveland Clinic](#)

Urinary reconstruction and diversion is a surgical method to create a new way to pass urine after the bladder has been removed.

[Urinary diversion - Wikipedia](#)

Urinary diversion is any one of several surgical procedures to reroute urine flow from its normal pathway. It may be necessary for diseased or defective ureters , bladder or urethra , either temporarily or permanently.

[Urostomy and Continent Urinary Diversion - Kidney & Urology](#)

A urinary diversion may mean a urostomy, which requires a pouch to be worn outside the body, or a continent diversion, which involves the creation of a pouch or bladder inside the body, usually using part of the digestive tract.

[Urinary diversion - Bladder & Bowel Community](#)

A continent urinary diversion is a similar sort of operation to an urostomy, except that you will not be required to use

a pouch. A section of your bowel will be used to create an internal pouch that is used to store your urine.

Urinary diversions | EAU Patient Information

The ileal conduit is a new tube to carry urine out of the body. It is made from a section of your small intestine. The conduit runs from the kidney to an opening in your belly, called a stoma or a urostoma.
